RITUWILD

Financial Clarity

A practical guide to your budgeting workbook. Income. Spending. Goals. A clearer month.

PRINT EDITION / A4

Undated / English / Edition 1.0 / October 2026

Begin with one month

Use a clear record, not a perfect forecast.

Set up the workbook

Keep an untouched copy. Open the XLSX in an application that supports its formulas. On Overview, enter the first day of your chosen month and a currency label. Use a single currency consistently; changing the label does not convert any amount. The template opens on October 2026 as an editable example period, with no transactions.

Choose a plan

On Budget, enter expected income and planned amounts for the fourteen categories. The plan is one reusable selected-month plan: changing the month does not save the old planned amounts. Save a dated copy for each month if you want plan history. Dated transactions remain in the same transaction log.

Record what happened

Transactions has 1,000 entry rows, from row 7 to row 1006. Enter actual dates, a type, category, description and numeric amount. Amber cells are editable inputs. Calculated cells are not intended for typing. Do not insert records outside the prepared range without extending formulas and validation.

Read the result

Overview shows selected-month income, expenses and money remaining, plus a twelve-month view for the selected year. The figures describe recorded movements, not your bank balance or a guarantee of available funds. Reconcile the log with your own records.

A worked month

Illustrative figures only. Use your own currency.

Example transactions

Salary: Income 3,000 on October 1. Rent: Expense / Housing 1,000 on October 2. Groceries: Expense / Groceries 100 on October 3. Grocery refund: Expense / Groceries -20 on October 4. Savings transfer: Transfer 500 on October 31. Subscription: Expense / Subscriptions 10 on October 31. An Expense of 75 dated November 1 belongs to November.

Expected October result

Income is 3,000. Expenses are 1,090: rent 1,000 plus net groceries 80 plus subscription 10. Money remaining is 1,910. The 500 transfer does not change the income/expense result because it moves money between your own accounts. It can still affect the balance of a particular account, which this workbook does not reconcile automatically.

Compare with the plan

A grocery plan of 150 against actual net spending of 80 leaves 70 under plan. A negative under/(over) value means spending exceeded that category plan. If total expenses are zero, spending-share percentages remain blank. Refunds can make a category negative and can make ordinary share comparisons less useful.

Review rows that need attention

Overview counts transaction rows with a Check message. Transactions flags missing or invalid dates and amounts, unknown expense categories and unknown types. Dropdowns help but pasting can bypass validation. A zero review count does not independently prove your log matches your statements.
