RITUWILD

Steady Strength

A 12-week training and habit tracker. Build a rhythm you can return to.

PRINT EDITION / A4

Undated / English / Edition 1.0 / October 2026

Use the tracker your way

Record your chosen routine, effort and recovery.

What is included

Six starting exercises, twelve weekly plans, thirty-six session logs, twelve weekly reviews, three block reviews and reusable notes. Each week has three session pages. Extra sessions can use a reprinted log or the open notes pages. This resource does not include a prescribed exercise or nutrition program.

At the start of a week

Choose intended activities and time windows, note your recovery context and select up to four supporting habits. Use your own mark key: completed, smaller version, rest or not done. A planned rest day can be a successful plan decision.

After a session

Record what happened in the exercise/activity log, then note effort and one practical observation. At the weekly review, compare the plan with the actual week and choose one adjustment. Complete the block reviews after Weeks 4, 8 and 12.

Digital or print

For the Digital edition, save a copy in a form-capable PDF reader and test a short answer by saving, closing and reopening. Browser/mobile preview support varies. Keep entries concise and use notes for extra detail. Print the separate A4 edition at actual size, or Fit with margins checked. Retain an untouched original for a later cycle.

Your existing routine

Start with activities you already choose or have been advised to do.

This tracker records your training; it does not prescribe a workout. List the activities you currently use, the equipment or setting they need and any instructions you already follow. Keep movements or loads you are uncertain about for discussion with an appropriate professional.

Choose a manageable number of weekly sessions. The included three session logs per week support up to 36 sessions; you can print additional logs for personal use or use the open notes page for extra sessions. Rest and recovery can be intentional parts of the plan.

Activities I choose / Relevant guidance or limits I already follow

Available days, locations and equipment / Practical barriers

My ordinary-week session plan / What is a realistic reduced week?

Make room for the week

Match the schedule to your real commitments.

Place intended sessions beside work, care and travel commitments. Include preparation and travel time. A plan that requires an ideal day is unlikely to survive an ordinary week.

Use clear cues: after a regular appointment, before a known commitment, or at a consistent location. Decide how you will communicate a schedule change to anyone affected. Keep the next session easy to find.

Preferred session windows / Preparation or travel time

A recurring obstacle / My practical response

What must be ready / Who needs to know / My reminder cue

Session B: record the work

Date: _____ Start time: _____ Location: _____

Log the activity you chose. For each row, write the movement or segment, sets/repetitions/load with units or time/distance, and an observation. These are recording spaces, not exercise instructions.

01 Activity / Sets, repetitions and load OR duration and distance / Notes

02 Activity / Sets, repetitions and load OR duration and distance / Notes

03 Activity / Sets, repetitions and load OR duration and distance / Notes

04 Activity / Sets, repetitions and load OR duration and distance / Notes

05 Activity / Sets, repetitions and load OR duration and distance / Notes

06 Activity / Sets, repetitions and load OR duration and distance / Notes

Overall effort (your defined scale) / Energy or recovery note / Next useful observation

Session C: record the work

Date: _____ Start time: _____ Location: _____

Log the activity you chose. For each row, write the movement or segment, sets/repetitions/load with units or time/distance, and an observation. These are recording spaces, not exercise instructions.

01 Activity / Sets, repetitions and load OR duration and distance / Notes

02 Activity / Sets, repetitions and load OR duration and distance / Notes

03 Activity / Sets, repetitions and load OR duration and distance / Notes

04 Activity / Sets, repetitions and load OR duration and distance / Notes

05 Activity / Sets, repetitions and load OR duration and distance / Notes

06 Activity / Sets, repetitions and load OR duration and distance / Notes

Overall effort (your defined scale) / Energy or recovery note / Next useful observation

After Week 4: see the pattern

Use the recorded weeks rather than memory alone.

Compare like with like. A change in equipment, route, activity or available time can explain a difference. Notice sustainability as well as output. Choose a next phase that respects your present capacity and any guidance you follow.

Evidence from this block / A fair comparison and its limits

Consistency and recovery / What became easier or harder?

What I will keep, change or stop / Why

My next focus / Appropriate support if needed / Next review date
